Motivational speaker Gary Ryan Blair says, "Advancement only comes with habitually doing more than you are asked." This seems to be the unofficial vision statement at Regis University, where the School of Computer and Information Sciences consistently sets the bar for other institutions around the nation.

The extensive programs offered by Regis are gaining recognition by students and professionals alike. Staff and faculty are united by a commitment to making Colorado a national hub for computer security. This goal, as Dr. Stamos Karamouzis, dean of the School of Computer and Information Sciences, says, "requires constantly advancing in the fields of computer science and technology."

Thanks to highly experienced professors and state-of-the-art facilities, the dream is becoming a reality. Along with the United States Air Force Academy and Denver University, Regis is recognized by the National Security Agency as a Center of Excellence in Information Assurance Education. This honor reflects the determination of the staff and faculty at Regis to blazing new trails in computer and technology related fields. Just as Regis is gaining acclaim in the

professional world, competitive students are constantly turning to Regis for quality education. Regis offers Master of Science degrees in Software Engineering, Information Assurance, Systems Engineering, Database Technology, Management of Information Technology, and Software and Information Systems. It also offers Bachelor of Science degrees in Computer Science, Computer Information Systems, Computer Networking and Business Technology Management. According to the National Science Foundation, Regis ranks ninth out of 422 institutions for the number of master's degrees awarded in Computer Science.

Regis' growing popularity is credited to what Karamouzis describes as a unique understanding of learning. "On top of our commitment to flexibility, the way we teach classes sets us apart from other schools," he says. "Engaging the minds and skills of adult learners is fundamentally important to us. We don't treat our students as passive learners, but as active doers." The emphasis, according to Karamouzis, is not on transferring knowledge that may be obsolete within a matter of months, but on cultivating critical thinking skills that

"have no expiration date."

Regis' approach to education is tailored to meet the needs of both traditional and non-traditional students. Weekend, nighttime and online classes are offered to cater to students' schedules. But unlike other colleges, Regis does not stop there. Non-traditional students are offered the same quality education you'd expect from an in-classroom setting. Thus, online learners are provided with access to a state-of-the-art virtual laboratory that simulates the in-class experience.

"We customize our programs for serious professionals looking to get ahead in their careers," says Karamouzis. "That means encouraging students to bring their work experiences into the classroom."

Understanding the needs of our military community, Regis offers tuition discounts for service men and women and their spouses. Financial aid and scholarships also are available.

Students interested in rising to the challenge of a Regis University education can visit the Web site at www.regis.edu or contact an admissions counselor at 800-388-2366. ■
